Course Objectives – Objectifs du cours :

This course provides an overview of the field of political science. It is divided into two main parts. The first focuses on the study of institutions to understand the most fundamental components of any polity. It addresses questions on the origins of the modern state, the causes of state failure, the triggers of civil conflict, the implications of civil wars, classifications of regime types, the drivers of democratization, the returns from democracy, and the management of authoritarian regimes. The second part of the class integrates the study of institutions with that of individuals' political behavior. It covers a variety of topics to understand how citizens make their political decisions and how political and non-political institutions reflect on individuals' interaction with the political sphere. In this part, we will examine why individuals turn out to vote, how ethnic identities get politicized, whether ethnic diversity is good for economic growth and political stability, how religion shapes individuals' electoral choices and political attitudes, why women are politically marginalized in some places more than others, the implications of gender quotas, and whether social media could threaten political and social welfare.

This class is designed for students with no background in the study of political science. For some weeks, we will rely on a textbook to provide a general overview of the fundamental topics. This should help students to understand the basic concepts. Besides that, students are required to read a set of research papers every week. Each paper focuses on a particular question to provide a closer perspective on a certain issue and introduce students to research methods in political science. You are not required to understand all the details of the paper, but you should be able to extract the argument, understand how the evidence is generated, and critically assess the

credibility of the authors' claims. Some papers might contain sophisticated statistical analyses. Don't worry, you are not asked to understand such technical details. However, the goal is to be able to read research papers and understand their arguments, despite such technical details. The lecture will cover the outline of the week's readings and start a discussion around the week's theme. I will also highlight a particular concept or research methodology every week.
